Overview

The aim of this course is to prepare you to give a successful interview with a Cybersecurity firm for the position of Analyst in a SOC team. To full fill this aim we ensured to build a curriculum that enhances your technical capability right from the basics. In the first few sections, we deal with the foundations and fundamentals of IT security, networking, and SIEM tools.

This course will go into detail about what a SOC is and what it does. Students will learn the skills they need to become a successful SOC analyst. We will talk about the demand and need of a SOC analyst and how and where the knowledge required. We will use demos and exercises to focus on each topic.

In this course we cover the below:

We briefly describe who this course is meant for - the target audience and we define what SOC is: The Security Operations centre, what it does and can do and how it is relevant.

We cover why SOC is relevant and how it is an advantage to pursue a career in cybersecurity given the lack of quality resources available. We also share how we treat this subject for a newbie, how we teach from the fundamentals so that any layman can pick up the concepts and slowly build competence.

We cover the below curriculum that we have designed for you:

- 1)Cybersecurity basics and networking essentials
- 2)Security operations centre essentials - SIEM - Part 1
- 3)Security operations centre essentials - SIEM - Part 2
- 4)Security operations centre essentials - Antivirus
- 5)Security devices - fundamentals
- 6)Vulnerability Management
